Installing A USB Jump Drive Into GreenFeed For Configuring Wi-Fi
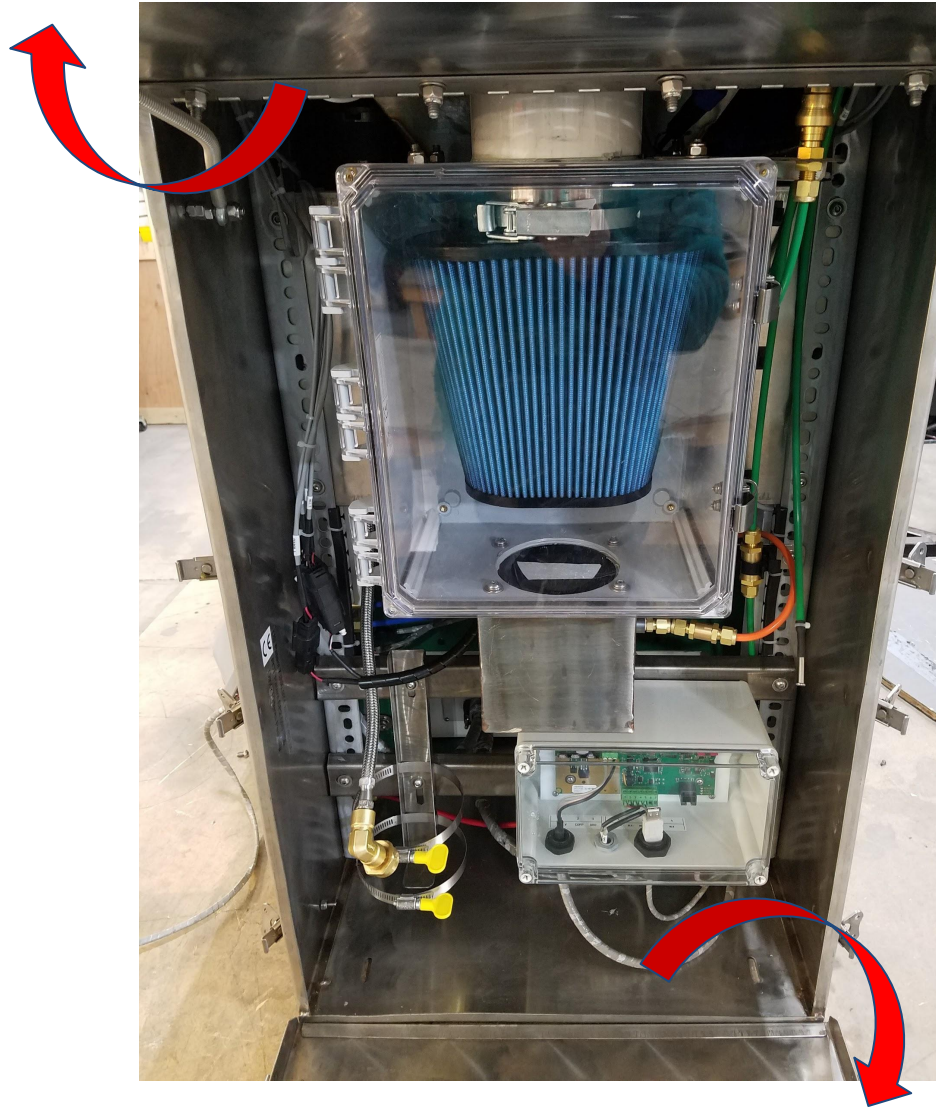

You will need:

1) A USB Jump Drive that has been formatted at FAT 4GB or smaller

2) A #2 Phillips Screwdriver

# Loosen The Six Latches On The Back Of GreenFeed

Lift The Air Filter Hatch and Remove The Bottom Hatch

Remove The RFID Reader Box Cover

Use a Phillips Screwdriver to loosen the 4 plastic screws of the lid.

Remove the lid to expose the USB plug.

Insert The USB Jump Drive

Shut Off GreenFeed

- Put the unit to sleep – From the main status screen, press SLEEP, then press ENTER to put the unit to sleep.

- Wait for data to upload – then press the "PWROFF" button

- Wait 30 seconds, then unplug main power from the unit.

Restart GreenFeed

- Turn the unit back on

- Once the main screen is displayed, wait 2 minute

- The jump drive is read once every minute (at the 00 second mark). So waiting 2 minutes will give it ample time to read the jump drive.

- Check if the unit is online. If it is not, try cycling power on the system.

Remove The Jump Drive

1) Remove the USB jump drive
2) Put the lid cover back on and tighten the screws
3) Put the bottom hatch back on
4) Close the air filter box hatch
5) Tighten all 6 latches
